Writing analysis report · Pasted text · analyzed 2026-09-23 13:10

DEMO ANALYSIS — not a real prediction

Summary

The document	“new_L7_try” is 325 words long, in 20 sentences across 5 paragraphs. It takes about 2 minutes to read.
The result	Result: Possibly AI-assisted. The AI-associated signal is 36%, with 74% confidence and 26% uncertainty. The combined signal sits in the middle, which is consistent with AI assistance, heavy editing, or simply a formal writing style. This result comes from the demo detector, which combines hand-chosen signals and has no measured accuracy. Read it as an illustration, not as evidence about this document.
What stands out	Vocabulary is varied for a text of this length. Few stock phrases from the pattern library appear.
Strongest signals	Personal voice: Almost no first-person voice. Semantic spread: Sentences stay close to one another in meaning, covering little ground. Vocabulary spread: A small set of words carries much of the text.
What this is not	A result describes measurable characteristics of the text. It does not prove authorship, AI use, plagiarism or misconduct.

Result

Measure	Value
Label	Possibly AI-assisted
AI-associated signal	36%
Confidence	74%
Uncertainty	26%
Detector	demo-0.1 (demo)
Pipeline	0.7.0
Embeddings	sentence-transformers (all-MiniLM-L6-v2)

- Only 325 words; confidence rises up to about 400.
- Signal families disagree with one another.

Signal breakdown

Signal	Family	Score	What was found
Formulaic phrasing	Linguistic	0%	Few stock phrases from the pattern library.
Marker-led sentences	Linguistic	0%	Sentences rarely open with a discourse marker.

Semantic spread	Semantic	64%	Sentences stay close to one another in meaning, covering little ground.
Neighbour similarity	Semantic	55%	Consecutive sentences restate each other closely.
Sentence openings	Structural	0%	Sentences begin in varied ways.
Repeated openings	Structural	50%	Several sentences begin with the same two words.
Sentence-length regularity	Statistical	29%	Sentence lengths vary.
Vocabulary spread	Statistical	61%	A small set of words carries much of the text.
Personal voice	Stylometric	92%	Almost no first-person voice.
Contractions	Stylometric	8%	Contractions appear, as in ordinary speech.

Writing profile

Scores from 0 to 100 against fixed reference ranges, not percentiles. They describe the writing, not the writer.

Dimension	Score	How it is measured
Vocabulary diversity	100	From moving-average type-token ratio, rescaled between 0.55 (repetitive) and 0.85 (highly varied).
Sentence variation	47	From sentence-length variation, rescaled between 0.15 (very even) and 0.75 (highly varied).
Syntax complexity	82	From clauses per sentence, rescaled between 1 (simple sentences) and 3 (heavily subordinated).
Formality	61	From the Heylighen & Dewaele F-score, rescaled between 35 (conversational) and 75 (formal academic).
Repetition	0	From the share of repeated three-word sequences, rescaled between 0 and 0.15.
Personal voice	4	From the share of first-person pronouns, rescaled between 0 and 0.08.
Semantic diversity	45	From how much sentences differ from one another, rescaled between 0.5 (circling one idea) and 1.0.

Sentence analysis

#	Sentence	Words	Signal
1	**Skill Issue: The Internet's Bluntest Diagnosis**	6	heading
2	"Skill issue" began as gaming trash talk, a two-word reply to anyone who blamed lag, bad teammates, or an "overpowered" character for their loss.	25	57%
3	Its meaning is simple: the problem isn't the game, it's you.	11	32%
4	The phrase spread quickly from competitive shooters and fighting games into social media in general, where it now answers almost any complaint.	22	47%
5	Someone struggles to assemble IKEA furniture, burns their toast, or can't parallel park, and a stranger replies "skill issue."	19	34%
6	Much of its appeal is its efficiency.	7	26%
7	In two words it dismisses excuses, delivers a mild insult, and gets a laugh.	14	29%
8	Beneath the mockery, the phrase carries a surprisingly useful idea.	10	31%
9	By refusing to accept external excuses, "skill issue" points at the one thing a person can actually control: their own ability.	21	39%
10	Lag and matchmaking are out of your hands, but practice, strategy, and patience are not.	15	33%
11	Coaches, teachers, and athletes have long taught the same lesson.	10	27%

12	Improvement starts when you stop blaming circumstances and ask what you could do better.	14	33%
13	Said to yourself instead of to someone else, "skill issue" can work as motivation, a reminder that failure is often temporary and that skill is something you can build rather than something you're born with.	35	42%
14	Still, the phrase has limits, and using it carelessly can be unfair.	12	17%
15	Not every struggle comes down to personal skill.	8	36%
16	Some games really are badly balanced, some workplaces really are dysfunctional, and some people face barriers that effort alone can't remove.	21	33%
17	When "skill issue" is aimed at real structural problems or genuine hardship, it stops being playful and turns dismissive.	19	42%
18	The phrase works best as a lighthearted jab between friends, or as honest self-reflection, and not as a verdict on every problem.	23	34%
19	Knowing the difference between a real skill issue and a real obstacle may be the most important skill of all.	20	52%
20	Want me to put this in a doc or file you can keep?	13	20%

Limitations

- A result describes measurable characteristics of the text. It does not prove authorship, AI use, plagiarism, academic misconduct or intent.
- Every pattern measured here also appears in human writing.
- Formality, personal voice and contraction use reflect genre and register more than authorship.
- Results are unreliable for short texts, and for text that has been rewritten or paraphrased.
